

Qommunity

I was thinking about what we could build for QL1 that would be super cool, something everyone would love and actually use. Then it hit me—there's probably no community more degen and wilder than **Qommunity**. You know what I'm saying? From Mr. Potato to the gay singer or a gamer who loves to trash-talk, and even a chef—we've got it all. So, I figured we should create something that's not just thrilling and potentially profitable, but also straight-up cool and exciting.

Because honestly, where else can you find a brilliant physicist standing next to a guy in a gas mask?

It's called **TiQet**, because with just one ticket in your hand, you can bet on anything—from lotteries to when Putin might get assassinated.

Thank you to everyone who has worked with love and dedication to bring us to where we are today. Your passion and heart have been the driving force behind every step of our journey.

The TiQet Journey: Our Road Ahead

Alpha Phase

Publish WhitePaper and Roadmap

Launching Platform

Normal Lotteries Held Every 4 Days

(Buy Ticket With \$Qusdt)

65% The Winner

30% NFTs Holders -> Every NFT will recieve 1% on every Normal Lotteries

5% Team & Developments

Beta Phase

Bet On Real Events (Testing Phase) — Focus on Big Percentage For Non NFTs Holders

Updating NFTs' Artwork

Phase 1

\$Tiget Tokenomics Out

Airdrop \$Tiget To Users Base On Their Activities

New Distribution For Normal Lotteries

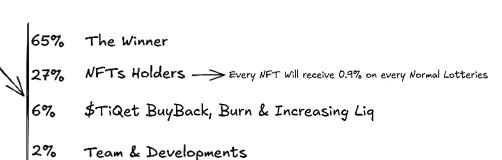

Buy Ticket With \$Qusdt

NFTs Holders

Events Lotteries

Social Engagements

Phase 2

Launching Events Proposal Contracts =

NFT's Holders Sending \$TiQet to Proposal Contract

\$TiQet Will Burnt Verifying Bets By Team & Oracles &

By The Proposal

10-5%

ightharpoonup Betting Is Activated 5% \$TiQet Burn

90-85% Winners

Proposal Minter

The TiQet Formula: Understanding the Process

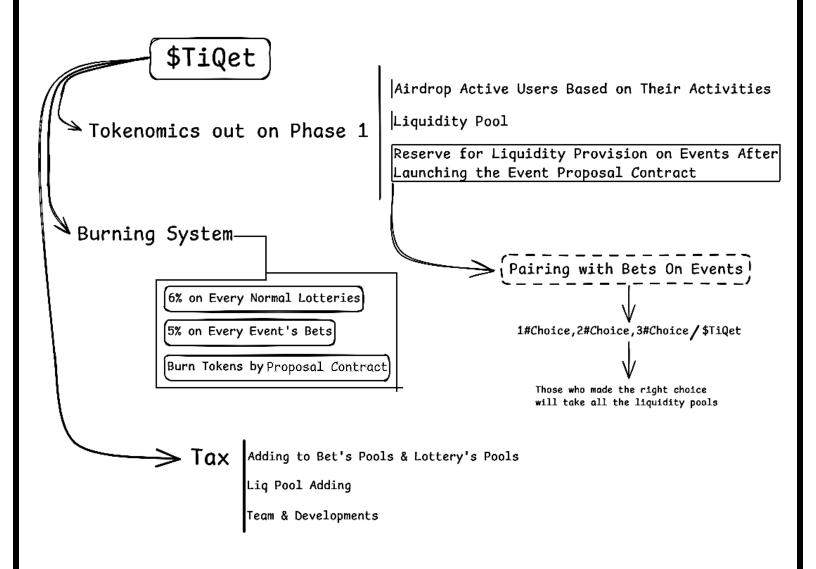

Until the launch of the native project token, payments within the platform will be made using \$QUSDT

The pots on the platform are divided into two categories: normal lotteries, where the prize distribution is as follows, and events, which have different distribution methods:

Payment with \$Qusdt will remain valid for normal lotteries, and before the phase two, all payments will processed using \$Qusdt and \$Qom.

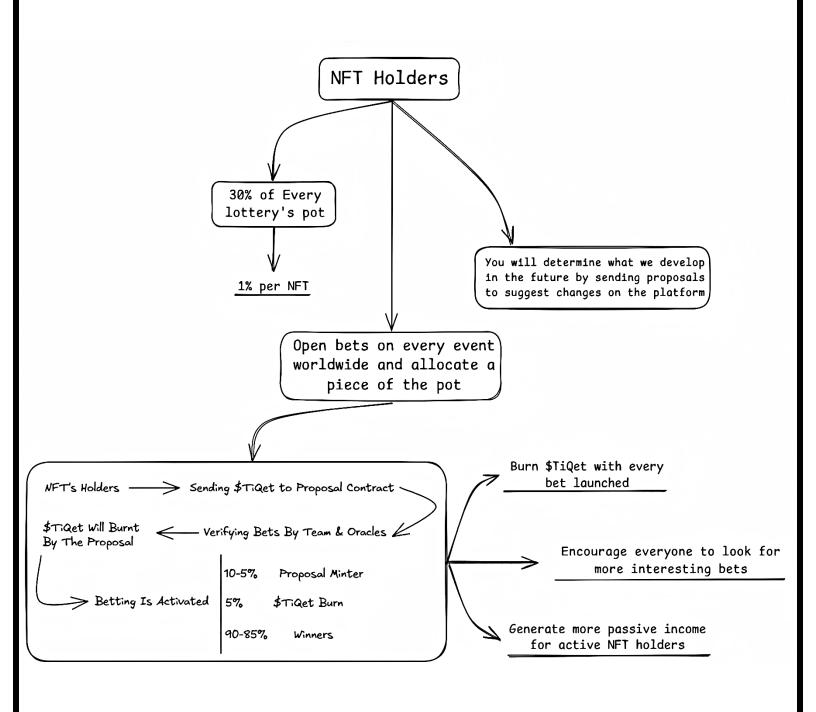

\$TiQet: Betting on a Better Tomorrow

I was thinking about making a ecosystem for our platform's native token that could maintain its value over the long term. The goal? To make sure the token stays strong despite reward distributions, supports a dynamic ecosystem, and keeps things sustainable for everyone. So, here's the plan we cooked up for \$TiQet: its supply gradually decreases as the number of users grows, creating scarcity over time. And, of course, you'll need \$TiQet to participate in all Events Lotteries on the platform. Here's everything you need to know about the token:

Golden TiQets

NFTs are the heart of our project, designed as a golden ticket because they can be as cool as Willy Wonka's golden ticket and offer you a whole new experience beyond their aesthetic value. There will be a total of 30 NFTs, and aside from the income each NFT generates in every round of the lottery, each holder of the collection will have the ability to influence and change the project's direction. Let me show you what's going to happen with the NFTs:

In normal lotteries, we do not use the **\$TiQet** token because there is a possibility that one day the lottery prize pool might approach large percentage of the token. Since only one person wins the lottery, this could lead to a dump of the token after each lottery event. To prevent such scenarios, we have decided to exclusively use **\$Qusdt** both as the prize and the entry fee for these lotteries.

This approach not only ensures price stability but also aligns with our long-term strategy. Additionally, the 6% buy and burn mechanism, which occurs every three days, contributes to the token's deflationary nature. This mechanism not only supports price growth but also strengthens the overall sustainability of the ecosystem. By adopting **\$Qusdt**, we aim to maintain fairness, protect our token's value, and provide a consistent experience for all participants.

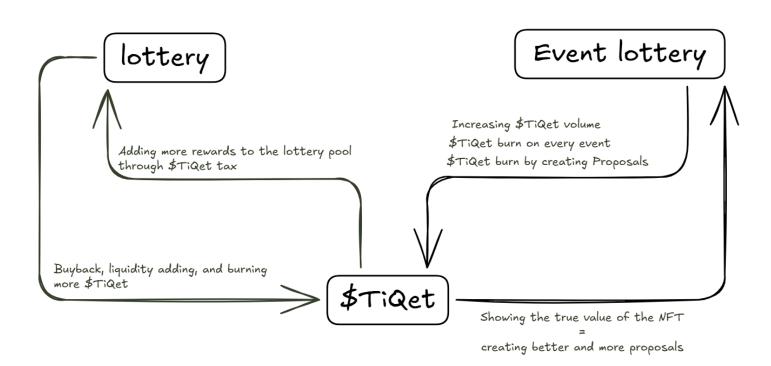

However, in the case of events, using the **\$TiQet** is feasible because the prizes are distributed among a large number of participants rather than being awarded to a single winner. This approach not only avoids the risks associated with sharp price drops but also increases trading volume and facilitates the burning of more tokens through the submission of proposals.

By implementing this strategy, we ensure fair distribution of rewards while simultaneously enhancing the platform's overall value, boosting the token's worth, and encouraging greater participation through a higher volume of tickets over time. This dual benefit strengthens the ecosystem and aligns with our vision for sustainable growth and engagement.

We haven't revealed anything yet, but we are focused on delivering the largest airdrop on the chain. That's why you don't see any tokenomics or airdrop conditions at this stage—they're being kept secret until launch day. Rest assured, we're keeping track of everything.

Currently, we only have 30 NFTs, and you are the core cult of TiQet. I can't put a price on them yet because the potential revenue could far exceed expectations. It's all in your hands and depends on how creative you can be. As I said, you are the leaders of the cult, with the power to influence not only TiQet but potentially the entire QL1 ecosystem.

Seventy percent of the funds raised from NFT sales will go directly into the liquidity pool. Everything is interconnected, with each component driving and supporting the other.

You can choose to stay in the shadows or rise as a leader. As long as you hold a ticket in your hands, you will always be one of us.
